Thank you for purchasing this RKC product. In order to achieve maximum performance and ensure proper operation of your new instrument, carefully read all the instructions in this manual. Please place this manual in a convenient location for easy reference.

**SYMBOLS**

- **WARNING**: This mark indicates precautions that must be taken if there is danger of electric shock, fire, etc., which could result in loss of life or injury.
- **CAUTION**: This mark indicates that if these precautions and operating procedures are not taken, damage to the instrument may result.
- **!: This mark indicates that all precautions should be taken for safe usage.
- **!: This mark indicates important information on installation, handling and operating procedures.
- **!: This mark indicates supplemental information on installation, handling and operating procedures.
- **!: This mark indicates where additional information may be located.

---

**WARNING**

- An external protection device must be installed if failure of this instrument could result in damage to the instrument, equipment or injury to personnel.
- All wiring must be completed before power is turned on to prevent electric shock, fire or damage to instrument and equipment.
- This instrument must be used in accordance with the specifications to prevent fire or damage to instrument and equipment.
- This instrument is not intended for use in locations subject to flammable or explosive gases.
- Do not touch high-voltage connections such as power supply terminals, etc. to avoid electric shock.
- RKC is not responsible if this instrument is repaired, modified or disassembled by other than factory-approved personnel. Malfunction can occur and warranty is void under these conditions.

---

**CAUTION**

- This product is intended for use with industrial machines, test and measuring equipment. It is not designed for use with medical equipment and nuclear energy.
- This is a Class A instrument. In a domestic environment, this instrument may cause radio interference, in which case the user may be required to take adequate measures.

---

**NOTICE**

- This manual assumes that the reader has a fundamental knowledge of the principles of electricity, process control, computer technology and communications.
- The figures, diagrams and numeric values used in this manual are only for purpose of illustration.
- RKC is not responsible for any damage or injury that is caused as a result of using this instrument, instrument failure or indirect damage.
- RKC is not responsible for any damage and/or injury resulting from the use of instruments made by imitating this instrument.
- Periodic maintenance is required for safe and proper operation of this instrument. Some components have a limited service life, or characteristics that change over time.
- Every effort has been made to ensure accuracy of all information contained herein. RKC makes no warranty expressed or implied, with respect to the accuracy of the information. The information in this manual is subject to change without prior notice.
- No portion of this document may be reprinted, modified, copied, transmitted, digitized, stored, processed or retrieved through any mechanical, electronic, optical or other means without prior written approval from RKC.
1. OUTLINE

One V-TIO-E/V-TIO-F module enables temperature control corresponding to two channels. It has power supply and communication terminals in addition to temperature control input and output terminals. In addition, it has modular connectors for PLC communication/host communication. One digital input (DI) point and two digital output (DO) points can be optionally added.

[Communication type of modular connector]

Any of following communication types can be selected.

- PLC communication and host communication: Each 1 port
- Host communication: 2 ports

[Communication port assignment]

Three communication ports (COM. PORT1 to 3) of the V-TIO-E/F module can be selected from among the following four assignments.

<table>
<thead>
<tr>
<th>Assignment 1</th>
<th>Assignment 2</th>
<th>Assignment 3</th>
<th>Assignment 4</th>
</tr>
</thead>
<tbody>
<tr>
<td>COM. PORT1</td>
<td>Host communication 1</td>
<td>PLC communication</td>
<td>Host communication 2</td>
</tr>
<tr>
<td>COM. PORT2</td>
<td>PLC communication</td>
<td>Host communication 1</td>
<td>Host communication</td>
</tr>
<tr>
<td>COM. PORT3</td>
<td>Host communication</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

For host communication 1 or 2, its data bit configuration, communication speed and communication protocol can be independently set.

Internal communication terminals

Used when two or more temperature control modules are divided into some groups and then installed.

Temperature control module V-TIO-E/F

Modular connector

Selected by the PLC communication setting switch. COM. PORT2 and COM. PORT3 become the same communication specification.

For communication port assignments, see the 4. COMMUNICATION SETTING (P. 4).

All data are set by communication. For details, see the Module Type Controller SRV PLC/Host Communication Instruction Manual (IMS01P05-E).

● System configuration example

● Host communication 1/PLC communication

For multi-drop connection with the COM. PORT1 side, see the Module Type Controller SRV PLC/Host Communication Instruction Manual (IMS01P05-E).
2. PRODUCT CHECK

Before using this product, check each of the following:
- Model code
- Check that all of the accessories delivered are complete.
- Check that there are no scratch or breakage in external appearance (case, front panel, or terminal, etc).

V-TIO-□□□□□□□-□□□□□□□-□□□□□□□

J: Process low
K: Process high with hold action
L: Process low with hold action
Q: Deviation high with re-hold action
R: Deviation low with re-hold action
T: Deviation high/low with re-hold action
P: Heater break alarm
1: Control loop break alarm
2: Burnout
3: Temperature rise completion

(11) CT type (Each channel common code)
P: CTL-6-P-N
S: CTL-12-5S6-10L-N

(12) Communication function (COM. PORT1) 2
1: RS-232C
4: RS-422A

When “N” is selected in (7) or (9), (8) or (10) becomes “N.”

2 Internal communication terminals is RS-485, COM. PORT2/ COM. PORT3 is RS-422A (Fixed).

- For heat/cool PID control (V-TIO-F), input channel 2 becomes unused.
- For heat/cool PID control (V-TIO-F), Control output (CH1) corresponds to the heating output and Control output (CH2) corresponds to the cooling output.
- The heater break alarm function becomes invalid when the voltage/current output is selected as control output type.

3. PARTS DESCRIPTION

![Diagram of SRV component layout]

**Terminal cover**
- Indication lamps 1
- Address setting switch 1
- Event input/output connector
- Terminal cover

**Terminal cover**
- Indication lamps 2
- Modular connector COM. PORT1
- Modular connector COM. PORT2
- Modular connector COM. PORT3

**Temperature control side**
- FAIL/RUN
- RX/TX
- EVENT1 to 4

**PLC/host communication side**
- FAIL/RUN (for temperature control)
- RX/TX (for internal communication)
- EVENT 1 to 4

**Indication lamps 1**
- FAIL/RUN
  - When normally: A green lamp turns on (RUN)
  - When abnormally: A red lamp turns on (FAIL)
  - During self-diagnostic error: A green lamp flashes
- RX/TX
  - During data send and receive: A green lamp turns on
- EVENT 1 to 4
  - Display various states by setting.
  - Display contents:
    - Event 1 state, Event 2 state, Comprehensive event state, Output state, Control state

**Indication lamps 2**
- FAIL (for PLC/host communication)
  - When normally: A red lamp turns off
  - When abnormally: A red lamp turns on
  - Communication environment setting mode by the switch: A red lamp flashes
- RUN (for PLC/host communication)
  - When normally: A green lamp turns on
  - When abnormally: A green lamp turns off
  - Module configuration error: A green lamp flashes slowly
  - PLC communication error: A green lamp flashes slowly
  - Data collection just after the power is turned on:
    - A green lamp flashes rapidly
- COM. PORT1
  - During data send and receive: A yellow lamp turns on
- COM. PORT2/COM. PORT3
  - During data send and receive: A yellow lamp turns on

4. COMMUNICATION SETTING

Set communication setting before mounting and wiring of SRV.

**CAUTION**

Do not separate the module mainframe from the terminal base with the power turned on. If separated, adjusted data may be destroyed; control be stopped, and no return can be made.

### Setting at using PLC communication
- Address setting switch 1 (front) [See P. 5]
  - Set an address of module.
- Address setting switch 2 (left side) [See P. 5]
  - Set the unit address for PLC communication.
- PLC communication setting switch (left side) [See P. 5]
  - Set the communication speed, data bit configuration, and protocol for PLC communication. Set the same value as communication settings of PLC.
  - In addition, select the communication port of modular connector.
- Internal communication setting switch (right side) [See P. 6]
  - Use this module without changing the factory set values.

### Setting at using host communication 1
- Address setting switch 1 (front) [See P. 5]
  - Set an address of module.
- Address setting switch 2 (left side) [See P. 5]
  - Set the unit address for host communication 1.
- PLC communication setting switch (left side) [See P. 5]
  - Select the communication port of modular connector.
- Host communication setting switch (left side) [See P. 6]
  - Set the communication speed, data bit configuration, and protocol for host communication 1. Set the same value as communication settings of host computer.
- Internal communication setting switch (right side) [See P. 6]
  - Use this module without changing the factory set values.

### Setting at using host communication 2
- Address setting switch 1 (front) [See P. 5]
  - Set an address of module.
- Address setting switch 2 (left side) [See P. 5]
  - Set the unit address for host communication 2.
- PLC communication setting switch (left side) [See P. 5]
  - Set the communication speed, data bit configuration, and protocol for host communication 2. Set the same value as communication settings of host computer.
  - In addition, select the communication port of modular connector.
- Internal communication setting switch (right side) [See P. 6]
  - Use this module without changing the factory set values.
4.1 Address Setting
Set an address. For this setting, use a small blade screwdriver.

To avoid problems or malfunction, do not duplicate an address on the same communication line.

Module address setting
When using two or more modules, set the desired address to each module.
(Common to PLC communication and host communication)

- **High-order digit setting**
  - Set value \( \times 10 \)
  - Setting range: 0 to 30
  - (Factory set value: 0)

- **Low-order digit setting**
  - Set value \( \times 1 \)
  - Setting range: 0 to 30
  - (Factory set value: 0)

Module address setting differs depending on operation mode selection address settings.

- **Free setting (factory set value)**
  - Free settings can be made in the range of 0 to 30.

- **Continuous setting**
  - Set the V-TIO-E/F module address to 0 and also set other module addresses to consecutive numbers starting from 1.
  - When in the free setting, regardless of the number of modules connected when the power is turned on, much time is required until module recognition operation comes to an end compared to the continuous setting as this operation is performed to addresses from 0 to 30.

Always set the unit address of each group including 0, 4, 8 or C. 0, 4, 8 or C becomes the master for communication transfer.

Host communication
Differently from PLC communication, there are no group restrictions. Free settings can be made in the range of 0 to F.

For Modbus, the value obtained by adding “1” to the set address corresponds to the address used for the actual program.

4.2 Protocol Selections and Communication Speed Setting

PLC communication setting switch
Set the communication speed, data bit configuration, and protocol for PLC communication and host communication.
In addition, select the communication port of modular connector.

<table>
<thead>
<tr>
<th>Group</th>
<th>Address setting switch 2</th>
<th>Group</th>
<th>Address setting switch 2</th>

<td></td>
</tr>
</tbody>
</table>

Always set the unit address of each group including 0, 4, 8 or C. 0, 4, 8 or C becomes the master for communication transfer.

Unit address setting
When two or more V-TIO-E/F modules are multi-drop connected, set an address to each V-TIO-E/F module. This becomes the unit address of the SRV unit.
(Common to PLC communication/host communication)

Factory set value: 9600 bps

When connecting two or more modules (V-TIO-A, B, C or D) to the V-TIO-E/F module, match all of their communication speed, data bit configuration and communication protocol settings with the internal settings of the V-TIO-E/F module.

### Internal communication setting switch

Use this module without changing the factory set values.

[Factory set value]
- Communication speed: 38400 bps
- Data bit configuration: Data 8-bit, without parity
- Protocol: Modbus

[Factory set value of internal communication setting switch]
- No. 1: ON
- No. 5: OFF
- No. 2: ON
- No. 6: ON
- No. 3: ON
- No. 7: OFF
- No. 4: OFF
- No. 8: OFF

When two or more V-TIO-E/F modules are multi-drop connected, set the PLC communication setting switches in all of the V-TIO-E/F modules to the same positions.

Factory set value: Host communication 1 (RKC communication)

- Switch No. 7 and 8 must be always OFF. Do not set to ON.
- When two or more V-TIO-E/F modules are multi-drop connected, for switch Nos. 1 to 6 set the PLC communication setting switches in all of the V-TIO-E/F modules to the same positions.

For details of internal communication setting switch, see the Module Type Controller SRV PLC/Host Communication Instruction Manual (IMS01P05-E).
5. MOUNTING

5.1 Mounting Cautions

(1) This instrument is intended to be used under the following environmental conditions. (IEC61010-1)
[OVERVOLTAGE CATEGORY II, POLLUTION DEGREE 2]

(2) Use this instrument within the following environment conditions.
- Allowable ambient temperature: −10 to +50 °C
- Allowable ambient humidity: 5 to 95% RH
(Absolute humidity: MAX.W.C 29.3 g/m² dry air at 101.3 kPa)
- Installation environment conditions: Indoor use
Altitude up to 2000 m

(3) Avoid the following when selecting the mounting location.
- Rapid changes in ambient temperature, which may cause condensation.
- Corrosive or inflammable gases.
- Direct vibration or shock to the mainframe.
- Water, oil, chemicals, vapor or steam splashes.
- Excessive dust, salt or iron particles.
- Excessive induction noise, static electricity, magnetic fields or noise.
- Direct air flow from an air conditioner.
- Exposure to direct sunlight.
- Excessive heat accumulation.

(4) Mounting consideration
- Install the module 200 mm away from the main power line.
- Ensure at least 50 mm space on top and bottom of the control unit for maintenance and environmental reasons.

(5) This instrument is permanently connected to equipment, please take the following points.
- A switch or circuit-breaker shall be included in the building installation.
- It shall be in close proximity to the equipment and within easy reach of the operator.
- It shall be marked as the disconnecting device for the equipment.

5.2 Dimensions

The above figure shows when provided with the event input/output connector, but the same also when not provided with the connector.

5.3 DIN rail Mounting

Mounting procedures
1. Pull down the mounting bracket at the bottom of the module (A). Attach the hooks on the top of the module to the DIN rail and push the lower section into place on the DIN rail (B). (Fig. 1)
2. Slide the mounting bracket up to secure the module to the DIN rail. (Fig. 2)

End Plate mounting
Hold tight both ends of the modules jointed together with the end plates and then fix the end plates with screws. Even if only one V-TIO-E/F module is used, also hold tight both ends of the module with the end plates.

Removing procedures
Pull down a mounting bracket with a blade screwdriver (A). Lift the module from bottom, and take it off (B).

● Depth in connector mounting
Conduct installation in consideration of the sizes of the connector and cable when connector-connected.

[Unit: mm]

Connector (plug): SRVP-01 (sold separately)

For the conservation of the contact of connector, install a joint connector cover in module of both ends.
5.4 Panel Mounting

Mounting procedures
1. Pull down the mounting bracket (A) until locked and that a mounting hole appears.
2. Prepare one mounting bracket per module (B) sold separately (KSRX-55) and then insert it in the rear of the terminal board at top of the module until locked but a mounting hole does not disappear.
3. Mount each module directly on the panel with screws which are inserted in the mounting holes of the top and bottom mounting brackets.

Recommended tightening torque: 0.3 N·m (3 kgf·cm)

The customer needs to provide the M3 size screws. Select the screw length that matches the mounting panel.

(A) Pull down
(B) Insert

Mounting bracket (Sold separately) [KSRX-55]

Mounting holes

5.5 Jointing Each Module

Up to 31 SRVs consisting of the each modules can be jointed together. Joint these modules according to the following procedure.

Jointing procedures
1. Mount the modules on the DIN rail and then joint these modules together with the joint connector while sliding the relevant module.
2. Lift each of the joint tabs located at the top and bottom of the module and then insert it in the slot of the adjacent module to fix these two modules.

For panel mounting, first joint each module and then mount it on the panel.

6. WIRING

To prevent electric shock or instrument failure, do not turn on the power until all the wiring is completed.

6.1 Wiring Cautions
- For thermocouple input, use the appropriate compensation wire.
- For RTD input, use low resistance lead wire with no difference in resistance between the three lead wires.
- To avoid noise induction, keep input signal wire away from instrument power line, load lines and power lines of other electric equipment.
- If there is electrical noise in the vicinity of the instrument that could affect operation, use a noise filter.
  - Shorten the distance between the twisted power supply wire pitches to achieve the most effective noise reduction.
  - Always install the noise filter on a grounded panel. Minimize the wiring distance between the noise filter output and the instrument power supply terminals to achieve the most effective noise reduction.
  - Do not connect fuses or switches to the noise filter output wiring as this will reduce the effectiveness of the noise filter.
- Power supply wiring must be twisted and have a low voltage drop.
- For an instrument with 24 V power supply, supply power from a SELV circuit.
- A suitable power supply should be considered in the end-use equipment. The power supply must be in compliance with a limited-energy circuits (maximum available current of 8 A).

6.2 Terminal Configuration

- For heat/cool PID control (V-TIO-F), input channel 2 becomes unused.
- For heat/cool PID control (V-TIO-F), Control output 1 corresponds to the heating output and Control output 2 corresponds to the cooling output.
6.3 Pin Layout of Connector

### Modular connector

- **COM. PORT1:** Connector for PLC or Host computer connection
  - Based on RS-422A/RS-232C (Specify when ordering)
- **COM. PORT2:** Connector for PLC or Host computer connection
  - Based on RS-422A
- **COM. PORT3:** Connector for SRV unit extension
  - Based on RS-422A

#### RS-422A

<table>

#### Circuit configuration

- **Attention in Connector (plug) Wiring**
  - Use the following connector (plug) as that connected to the event input/output connector.
  - Connector (plug) is sold separately:
    - SRVP-01 (Front-screw type)
    - SRVP-02 (Side-screw type)
  - The lead wires use the stranded wire.
  - Use the stranded wire from size 0.2 to 2.5 mm² (AWG 24-12).
  - Stripping length is as follows:
    - SRVP-01: 10 mm
    - SRVP-02: 7 mm
  - Recommended tightening torque of the lead wire in the connector (plug): 0.5 to 0.6 N·m (5 to 6 kgf·cm)
    - Screw size:
      - SRVP-01: M2.5
      - SRVP-01: M3
    - [SRVP-01] Front-screw type
    - [SRVP-02] Side-screw type

- **Stripping length**
  - SRVP-01: 10 mm
  - SRVP-02: 7 mm

- **Stranded wire size:**
  - 0.2 to 2.5 mm² (AWG 24-12)
  - Recommended tightening torque: 0.5 to 0.6 N·m (5 to 6 kgf·cm)
7. SPECIFICATIONS

**Input**

Number of inputs: 2 points

Isolated between each channel:
- Thermocouple input, Voltage (low) input
- Not isolated between each channel:
  - RTD input, Voltage (high) input, Current input

Input type:
  - PLII (NBS)
  - W5Re/W26Re (ASTM-E988-96)
- RTD: Pt100 (JIS-C1604-1997)
- Voltage (low): 0 to 100 mV
- Voltage (high): 0 to 5 V, 0 to 10 V, 1 to 5 V
- Current: 0 to 20 mA, 4 to 20 mA

Sampling cycle: 500 ms

PV bias: – Input span to + Input span

CT input: 2 points
- 0.0 to 30.0 A (CTL-6P-N) or 0.0 to 100.0 A (CTL-12-S56-10L-N)

**Output**

Number of outputs: 2 points

(Isolated between input and output, and between output and power supply)

Output type:
- Relay contact: 250 V AC, 3 A (Resistive load)
  - 1a contact
  - Electrical life 300,000 times or more (Rated load)
- Voltage pulse: 0/12 V DC
  - (Load resistance 600 Ω or more)
- Current: 0 to 20 mA DC, 4 to 20 mA DC
  - (Load resistance 600 Ω or less)
- Voltage: 0 to 5 V DC, 0 to 10 V DC, 1 to 5 V DC
  - (Load resistance 1 kΩ or more)

**Control action**

Number of controls: 2 points

Control method: Brilliant PID control

Reverse action or direct action is selectable (Specify when ordering)

Heat/cool control is selectable (Specify when ordering)

Additional function: Autotuning function

**Event**

Number of events: 2 points/channel

Event type:
- Temperature event: Deviation high, Deviation low, Deviation high/low, Band, Process high, Process low
- Heater break alarm, Control loop break alarm, Burnout, Temperature rise completion

**Option**

**Event input**

Number of inputs: 1 point

Input type: Dry contact input

Input voltage: 24 V DC (Rated)

Input current: Approx. 6 mA

Input details:
- Control RUN/STOP
- Event interlock release (Specify when ordering)

**Event output**

Number of outputs: 2 points

Output type:
- Relay contact output
  - 250 V AC, 1 A (Resistive load)
  - 1a contact
  - Electrical life 300,000 times or more (Rated load)

Output details: Temperature event, Heater break alarm, Control loop break alarm, Burnout, Temperature rise completion (Specify when ordering)

**Communication**

Number of communications: 2 points

- PLC communication and host communication: Each 1 port
- Host communication: 2 points (Selectable)

**PLC communication**

Communication interface: Based on RS-422A, EIA standard

Based on RS-232C, EIA standard (RS-232C: COM. PORT1 only)

Communication protocol:
- MITSUBISHI MELSEC series special protocol
  - ACPU common command (WR/WW)
    - (A series, FX2N, FX2NC series)
  - AnA/AnUCPU common command (QR/QW)
    - (AnA/QuA series, Q series)
- OMRON SYSMAC series special protocol
  - C mode command (RD/WD)

Maximum connections: 4 V-TIO-E/F modules per communication port of PLC

**Host communication**

Communication interface: Based on RS-422A, EIA standard

Based on RS-232C, EIA standard (RS-232C: COM. PORT1 only)

Communication protocol: RKC communication or Modbus

Maximum connections: RS-422A: 16 V-TIO-E/F modules
RS-232C: 1 V-TIO-E/F module

**Others**

Power supply voltage: 24 V DC

Power supply voltage range: 21.6 V DC to 26.4 V DC

Current consumption:
- With event input/output (option): 160 mA max./module
- Without event input/output (option): 140 mA max./module

Allowable ambient temperature: –10 to +50 °C

Allowable ambient humidity: 5 to 95 %RH

Absolute humidity: MAX.W.C 29.3 g/m³ dry air at 101.3 kPa

Installation environment conditions:
- Indoor use
- Altitude up to 2000 m

Weight:
- With event input/output (option): Approx. 260 g
- Without event input/output (option): Approx. 250 g
